What a person with no technical background sees:
A page titled "Connect Wallet" with icons of every major crypto wallet — MetaMask, Trust, Coinbase, Ledger, Aave, Rainbow, 1inch, Huobi and 20+ more. Looks exactly like a legitimate DApp connection interface. One click on any wallet icon leads to seed phrase entry or silent transaction approval.

Attack Mechanism

This is **the oldest and most widespread crypto fraud vector** — unchanged since 2020. The design is identical across thousands of phishing sites. No novel technique. No ambiguity. Every security vendor, every blocklist, every crypto user community recognizes this pattern immediately.

A person from any background who has ever used a crypto wallet understands: "Connect Wallet" + wallet logos = this asks for access to my funds.

A registrar's abuse team — whose professional function is to process exactly these reports — has no basis for uncertainty about what this page does.

The Core Question for ICANN

NiceNIC's selective responsiveness — acting for Netcraft, ignoring all others — reveals a system based on **the authority of the reporter, not the evidence in the report**.

This inverts the RAA obligation entirely. The obligation is triggered by **actionable evidence**. The page pictured here is self-evidently actionable. 7 independent security vendors confirmed it. It has been serving victims for 172 days after our report.

Should threat intelligence organizations be required to employ agents who personally write to each registrar's abuse team to receive the same response that a one-click suspension would provide?

This is not how a functional internet abuse ecosystem works. And it is not what the RAA requires.

Note: This case is one of 13,104 domains reported to NiceNIC in 2026 with equivalent or greater evidence. The pattern is identical across all of them. This page is shown as a representative example of content whose malicious nature requires no technical expertise to identify.

Timeline

- 2025-09-29
Registered at NiceNIC
- 2026-02-13 14:31
Detected — screenshot captured — live phishing confirmed
- 2026-02-13 21:53
Report sent to abuse@nicenic.net with full evidence
- 2026-08-05 — 172 days later
Domain alive. HTTP 200. No hold. No response. No action.
